

# PRESS RELEASE

Frankfurt / Naples, 5 July 2023

## **Lufthansa and Naples, together for 55 years**

July 1968: 55 years ago marked the first Naples-Frankfurt flight operated by Lufthansa, and the beginning of the airline's success story in Naples.

Currently, 19 flights to Frankfurt and 20 flights to Munich depart weekly from Naples airport. The flights, operated with Airbus A320 and A321 aircraft, in less than two hours carry Lufthansa passengers to the Frankfurt and Munich hubs, from where they can continue their trip to over 200 destinations throughout the world.

“We are delighted to celebrate Lufthansa's 55th anniversary in Naples today”, said Gabriella Galantis, Senior Director Sales Southern Europe Lufthansa Group, “because it's a sign of Lufthansa's ongoing presence in the Campania region. The 39 weekly flights connecting Naples with our two major hubs facilitate trade with Germany and the rest of the world. Naples and Campania are leading tourist destinations in Italy, and Lufthansa is proud to contribute to their growth through its global network of connections. And as proof of the relevance Naples airport has for us, we are also excited to welcome onboard Nicola de Paola, our new Station Manager for Naples.”

“Lufthansa's enduring presence on the market is proof of the robustness of this group, which has always relied on qualitative service, strategic vision and compliance with the highest standards of operational safety and environmental protection. We are excited to celebrate Lufthansa's first 55 years in Naples. Lufthansa is the leading carrier in Naples in terms of connectivity, thanks to the extensive network of international and intercontinental connections offered by the Frankfurt and Munich hubs” said Roberto Barbieri, CEO of GESAC.

Lufthansa Group Airlines operates with modern sustainable aircraft and takes part in several projects aimed at reducing CO2 emissions and producing more sustainable aviation fuel (SAF). In addition to that, with Compensaid all passengers can easily offset their emissions when booking their flight now.
